

STEP 1: PLANNING PHASE

We sit down with you in a face-to-face meeting to go over all the requirements of your custom build. Once we have blueprints finalized and materials researched, you will be given an official quote.

STEP 2: EXCAVATION & FOUNDATION

It's critical to have experienced builders to manage your excavation & foundation. Every custom build from Perry Homes comes with an on-site project manager ensuring the foundation is done correctly and your property is graded properly.

STEP 3: FRAMING & EXTERIOR

When we get the framing and exterior portion of the home under way, that's typically when clients start to show their excitement. We work extra hard during this stage to meet deadlines since weather is unpredictable.

STEP 4: INTERIOR

This is where things start to all come together and the dream home becomes a reality. This is one of the reasons why you hire a craftsman custom company like Perry Homes over the large companies or small journeyman.

STEP 5: THE KEYS

The last step is a final walk-through review with our clients to go over the build in detail and hand over the keys to your new home. It will be comfortable, energy efficient, completely custom, and built to stand the test of time.

"On-time and on-budget, it's the Perry Homes guarantee."
